Introduction

This “Study Strategies and Exam Preparation Guide” helps you prepare to write the Interprovincial (IP) Red Seal or Provincial Certification exam. It provides direction and information on such areas as study habits, test preparation, and test taking techniques.

Exams are supervised by the Apprenticeship and Trades Certification Division. For a list of trades, visit the Department of Advanced Education, Skills and Labour website at [www.gov.nl.ca/app/](http://www.gov.nl.ca/app/). If you are approved to write an exam, please contact your regional office for further information and assistance.
**Tips: Preparing for Interprovincial or Provincial Exams**

*Understanding the Examination Process*

Certification exams are either Interprovincial (Red Seal - all provinces) or Provincial (Newfoundland and Labrador). Generally, they are multiple-choice and based on the National Occupational Analysis and Plans of Training.

**INTERPROVINCIAL/PROVINCIAL EXAMS**
- 100 – 150 Multiple Choice
- One Correct Answer
- Four (4) Hour Time Limit
- Passing Grade is 70%

**PROVINCIAL**
- Certification exam which is developed by the Government of Newfoundland and Labrador and assesses the qualifications of an individual in a particular trade
- Based on the provincial Plan of Training
- Recognized in Newfoundland and Labrador

**INTERPROVINCIAL RED SEAL**
- National certification exam which assesses the qualifications of an individual in a particular trade
- Based on the National Occupational Analysis (NOA)
- Recognized throughout Canada

**PLAN OF TRAINING**
- An outline of what you will learn while you are in school

**NATIONAL OCCUPATIONAL ANALYSIS (NOA)**
- Describes the skills and knowledge needed to perform at the journeyperson’s level
National Occupational Analysis (NOA) - Test Your Knowledge

The National Occupational Analysis (NOA) is a document used for IP Red Seal trades that describes the knowledge and abilities required by a fully competent tradesperson working in that trade. The content for the IP Red Seal exam is drawn from the NOA. NOAs can be found at www.red-seal.ca.

1. The NOA material is organized into major content areas called BLOCKS. These blocks are further broken down into TASKS and SUB-TASKS.

2. The IP Red Seal exam is written to test your knowledge and abilities in relation to the sub-tasks in the NOA.

3. Be sure to study all of the material contained in the NOA for your trade, and do not study material that is not contained in the NOA because it will not be on the IP Red Seal exam.

4. Pay attention to the proper names of tools, equipment, and processes, because those found in the NOA will be the ones used in the IP Red Seal exam.

Self-Assessment

In the back pages of a NOA, you will find a pie chart identifying the percentage of IP Red Seal exam questions for each block. It is essential to know these percentages because they help you determine where to concentrate and focus your study time. For example: If the IP Red Seal exam for your trade has 100 questions, based upon the pie chart below, there will be 40 questions from Block A.
Use the NOA to assess your current knowledge of the tasks and sub-tasks. Review each sub-task and place a checkmark (√) next to those you understand fully. Place more focus on those you do not understand and study them until you are comfortable with the material.

Think of possible questions in that particular content area. The supporting knowledge and abilities identified under each sub-task will provide you with helpful ideas for developing sample questions. Practicing these questions should assist you with the exam.

To help you better understand the material, summarize the information in your own way:

- Write brief summaries of major topics.
- Prepare diagrams or charts.
- Sort information in tables.
- Talk about it with others, especially others in the trade who have experience with the tasks contained in the NOA.
- Teach it to others.
- Analyze it.
- Apply the new information in your personal life or in the workplace.

If you find you are weak in areas that contain many of the questions, you may need increased exposure to the tasks and abilities through more practical work experience.

HELPFUL TIP

Ask the Apprenticeship representative assigned to your file, or your instructor, to tell you the total number of questions on the exam you are writing. This will allow you to calculate the percentage weight for content being tested.

HELPFUL TIP

Ask a friend or co-worker who has written the IP Red Seal Exam for your trade to identify study materials and resources they found helpful.

SOURCE: www.red-seal.ca/w.2lc.4m.2@-eng.jsp
The Exam: Answering Multiple Choice Questions

A multiple choice question consists of a stem (a complete question) followed by the options (a, b, c, d). The stem contains all the information necessary to answer the question. The options consist of the correct answer and three “distracters.” Distracters are incorrect.

REMEMBER: One question may ask you to recall facts while another may ask you to apply facts to a situation to test your ability to problem solve.

SAMPLE 1

Stem asks a direct question and you choose one correct answer.

If 5 litres of paint cover 20 square meters, how many litres are required to cover 400 square meters?

a. 40 litres  
b. 52 litres  
c. 80 litres  
d. 100 litres

SAMPLE 2

Stem appears to identify a false (no true) statement. In this case, the negative word (NOT) will be in bold letters.

Which of the following is NOT personal protective equipment?

a. hard hat  
b. safety glasses  
c. contact lenses  
d. ear protection

Note:  
Negative questions are not often used on certification exams; however, they can appear from time to time.
During the Exam

- Arrive early.
- Listen carefully to instructions given by the exam coordinator.
- Read directions carefully, then re-read.
- Be clear on what the question is asking.
- Answer what you know first.
- Don’t spend too much time on one question; however, do not rush through the exam.
- Focus on your own exam, as individuals may write an exam differently.
- When choosing your answer go with your instinct. Don’t second-guess yourself.
- Read all options before choosing.
- Use the process of elimination; treat each OPTION as a true/false.
- Re-read, very carefully, all questions containing negative wording such as “not” or “least” to ensure you understand it fully.
- Check for qualifying words such as “all, most, some, none”; “always, usually, seldom, never”; “best, worst” or “smallest, largest.” These words can cue a statement as true or false.
- If you encounter a question that you think you can’t answer, leave it to be answered last; BUT never leave it unanswered.
- Check over your exam, and then check it over a second time. Make sure you have answered all questions.
Essential Skills

Essential skills refer to skills needed for work, learning, and life and provide the groundwork for learning all other skills. They help people grow with their jobs while adapting to workplace changes. These essential skills include: reading text, document use, numeracy, writing, oral communication, working with others, continuous learning, thinking skills, and computer use.

Test your essential skills. Check out these two websites for sample problems used in TOWES (Test of Workplace Essential Skills):

Successful Study Plan

A study plan provides a roadmap to help you learn. It takes into account your strengths and weaknesses while establishing study habits you can follow. Follow the steps below to make your own study plan:

1. Define the content areas.
2. Determine your strengths and weaknesses.
3. Identify resources such as your textbook, your instructor, the Internet, local libraries, etc.
4. Create a study schedule and stick to it.

Study Skills

Performance on exams is determined to a great extent by the nature of your preparation. The way you prepare for an exam is much more important than the length of time you prepare. The following eight areas are suggestions to help you improve your study habits.

Start NOW!

Check off one or two techniques from the list below that you can commit to this week:

☐ Define clear goals. Make sure your expectations are reasonable.

☐ It is difficult to concentrate 100% of the time, so minimize distractions. Organize your workspace. Be comfortable. Sit in a comfortable chair with plenty of light.

☐ Do your most important tasks when you are most energetic, and then you can get them over with first.

☐ Make material you are learning or reading as interesting as you can by using association. Associating content with personal or work experiences can help you understand.

☐ Study in small time blocks instead of long time periods. This will help you retain information. It is a good idea to change the subject or task every hour. Take breaks when needed.

☐ Study, repeatedly, pieces of information over and over again. Studies indicate that individuals only retain a small amount of the information they hear or read. You can learn successfully through repetition as opposed to just reading something once.

☐ Review your notes at the end of the day and again at the end of each week.

☐ Reward yourself when you have completed a goal.
Getting the Most from Your Study Material

It is important to thoroughly read your study materials. They provide more information on topics learned in class as well as a better understanding of the theory to be applied outside the classroom.

Below is a five-step reading strategy commonly called SQ3R (Survey, Question, Read, Recite, Review), which helps you sharpen your reading skills and makes it easier to remember what you read and study.

<table>
<thead>
<tr>
<th>Survey the chapter before you read</th>
<th>Question what you are reading</th>
<th>Read</th>
<th>Recite after you read a section</th>
<th>Review to make sure you have memorized the information</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ Think about the title. Guess what will be covered in the chapter.</td>
<td>□ Write down your questions so you can go back to them later.</td>
<td>□ Read only a section at a time.</td>
<td>□ Ask yourself questions about what you have just read, or summarize, in your own words, what you read.</td>
<td>□ Review your questions and see if you can answer them within 24 hours and again within a week.</td>
</tr>
<tr>
<td>□ Read the introduction. These main ideas will help you make sense of the details.</td>
<td>□ Turn titles, headings, and sub-headings into questions.</td>
<td>□ Read groups of words, one at a time. Look for answers to your questions.</td>
<td>□ Take notes from the text, but put it in your own words.</td>
<td>□ Review is an ongoing process; do it often.</td>
</tr>
<tr>
<td>□ Read the main headings since these are the main ideas.</td>
<td>□ Keep in mind what information your instructor focused on in class.</td>
<td>□ Reread difficult portions of the chapter.</td>
<td>□ Highlight important points.</td>
<td></td>
</tr>
<tr>
<td>□ Read the summary. It will help connect all the main ideas.</td>
<td></td>
<td>□ Sort out information and decide what is important.</td>
<td>Note: If you can’t answer the questions or summarize the section in your own words, read the section again. If you can answer the questions, you are ready to move to the next section repeating the question, read, and recite process.</td>
<td></td>
</tr>
<tr>
<td>□ Read the questions at the end of the chapter. These repeat the main points.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Getting the Most from Class: Listen, Take Notes and Learn

During class, the instructor discusses important information which is likely to be included on exams. Good note taking and listening skills are critical.

1. Prepare for class by reviewing any readings and material.

2. Listen actively by sitting near the front and paying attention.

3. Take notes by putting in your own words what is covered in class.

4. If you are missing something or don’t understand what you wrote, go over your notes with the instructor or a classmate.

5. Within 24 hours of attending the class, review your notes, spending at least ten minutes on each set of class notes.

6. Organize your notes so you can effectively study.

7. Use a large, loose leaf notebook. Use only one side of the paper.

Draw a vertical line about 2 inches from the left side of your paper. This is the recall column. Write key words, phrases, or ideas from your class. Your notes would be taken to the right of this margin.

Record notes in paragraph form. When you review, cover up the right hand portion of your notes and go over the ideas of the lecture from the recall column.
Getting the Most from Studying: Prepare For Exams

Understanding, not memorizing, is the basis for learning. The goal is to understand and then remember what is important. Give yourself lots of time to study for exams. Study early and often.

1. Start well in advance, break your study into chunks, and review often.

2. Review your learning objectives (such as those found in the Plan of Training) before you begin to study. Then review your notes and text. This will help determine how much you have to study and you can organize your time.

3. Study using the “top down” method by beginning with the course’s main ideas, then following with the sub-topics and supporting information.

4. Decide which study technique would work best for you such as forming study groups or flash cards.

5. Test yourself often.

6. DO NOT learn any NEW material the night before the exam. You want to build confidence by reviewing what you know rather than worrying about what you don’t know.

Review

When reviewing, always try to divide your information in two sections:

- INFORMATION I KNOW
  - Review this information before the exam, but DO NOT spend most of your time here.

- INFORMATION I DON’T KNOW
  - This is where you need to spend your time. Once you have mastered the information, move on to another concept.

This ensures you do not waste time by practicing and reviewing what you know.

REMEMBER: You should not try to learn new material the night before an exam. At that point, you should review what you know and not worry about what you don’t know.
Flash Cards

Flash cards can be constructed from index or file cards, which can be purchased in any office supply store in a variety of colours. They can be used to study vocabulary, facts, formulas, and events.

When making flash cards:

- Write only one question along with its answer on each flash card.
- Write the question on one side and the answer on the other side.
- Use point form. Put information into your own words.
- Add diagrams and examples to the answer side.

When studying flash cards:

- Test yourself by dividing the cards into two piles: “I know it” and “I don’t know it.”
- Test yourself both ways: once asking the question, and once asking the answer.
- Stop practicing only when all of the cards are in the “I know it” pile.
- Review all cards regularly to ensure you know them all 100% for your exam.

Organizing your cards:

Store cards in a recipe/index card box. Dividers can be purchased so that cards can be organized by subject.

- Cards can be colour coded. If you purchase several colours, each subject can be a separate colour.
Memory Techniques

Memory and understanding are crucial to learning. In order to relate information you have learned to the exam, you must have instant recall of information along with an understanding of that information. Memory techniques are clues that help you to relate the information you need to remember with a visual image, a sentence, or a word. The following are some techniques you can use when you need to recall information:

Sentences

Use the first letter of each word you are trying to remember to make a sentence. For example: You want to remember the mathematical order of operations which are multiply and divide before you add and subtract so take the first letter of each of the four operations M, D, A & S. Now make a sentence such as: “My Dearest Aunt Suzie.”

Now if you were given a multiple choice question and asked the correct order of mathematical operations, it may be easier to remember that simple sentence. The first letter of each word will help you remember that the correct order is: multiply (The M in My), divide (The D in Dearest), add (The A in Aunt) and subtract (The S in Suzie).

Chunking

Use this technique to remember a long number or a long list of items. Chunking is based on the idea that short-term memory is limited in the number of things it can hold. A common rule is that a person can hold between five and nine items or chunks in short-term memory. Have you ever wondered why a telephone number is, on average, seven numbers?

When you use chunking to remember, you decrease the number of items you are holding in memory by increasing the size of each item. For example, the number 64831996 are eight numbers individually. Try thinking about the number as 64, 83, 19, and 96. Now, instead of eight individual numbers, you are remembering four larger numbers. Sometimes, it may be helpful to form chunks that are meaningful or familiar to you; so instead of 64, 83, 19, and 96, you may remember the whole number as 64, 83, and 1996 because 1996 represents a year and is more easily remembered.
Rhymes and Songs

Rhythm, repetition, and tune can all help with memory. Many children learn the letters of the alphabet to the jingle of “Twinkle, Twinkle, Little Star.” Other examples include “i before e, except after c” to help you remember how to spell words like “brief” or “receive” OR “spring ahead, fall back” to remember Daylight Savings Time.

Using this technique can be fun especially if you are imaginative. Rhymes and songs draw on your acoustic memory (hearing) and may be particularly useful for those who can learn tunes, songs, or poems.

REMEMBER: Don’t spend too much time creating rhymes and songs.

First Letter

This strategy involves the use of first letters in a list of information or from a group of words to form a NEW word. This is useful when you need to remember words in a specified order. First letter is very common in ordinary language and in many fields. Some examples of common first letter include NBA (National Basketball Association), MUN (Memorial University of Newfoundland), USA (United States of America), and WIST (Women in Skilled Trades). The first letter examples help you to remember a much longer group of words. Can you think of any?

Here is an example of using this technique to remember a list of key items relating to workplace safety. As you know, workplace safety depends upon Awareness, Common Sense and Training. As you can see the first letter of each item spells the word “ACT.”

REMEMBER: All the above techniques are meant to help you recall information not understand it.
Time Management

Start NOW!

Observe how you use your time and decide how you can make changes.

Check off one or two techniques from the list below that you can commit to this week:

- Make a daily “to do” list and prioritize it.
- Create a Monday to Friday file system:
  - Prepare five folders, one for each day (Monday to Friday)
  - Work needing to be done for a particular day should be placed in the previous day’s folder
  - Review and update daily
- Use a weekly planning schedule. Allocate specific periods each day for your study.
- Balance and control time spent on the telephone, television, and computer.
- Organize your study materials, clothes, and lunch the night before.
- Make class attendance a priority. Be punctual.
- Set up a regular routine of eating, sleeping, exercising, and studying. Develop a good balance.
- Break major tasks down and take one small step at a time.
- Set false deadlines. Make the deadline for final completion of a task at least one week in advance of the actual deadline.
- Avoid putting things off. Every time you do another activity instead of working on your goal, you are rewarding yourself for procrastinating.

Be Careful!

Postponing or putting off something is a learned habit and can be unlearned and replaced with more productive actions.
Wrap Up

The Study Strategies and Exam Preparation guide has been developed to help you prepare for the IP Red Seal and provincial exams. Its intention is to help you understand the organizational process of studying for an exam. It offers many tips, techniques, and tricks. We hope after using this guide, you will feel much more comfortable and confident and be better prepared for writing your exam.

If you have any questions, comments, or suggestions please feel free to contact one of the following regional offices for further information:

Department of Advanced Education, Skills and Labour
Apprenticeship and Trades Certification Division
Toll Free: 877-771-3737
www.aes.gov.nl.ca/app/

We welcome any feedback and/or recommendations pertaining to the usefulness of the Study Strategies and Exam Preparation Guide. The feedback form at the end of this guide can be used for this purpose.
Appendix A: Resources

Below you will find a list of study materials and resources to aid in the process of studying. You should also look for practice questions in study materials. You can contact the Apprenticeship and Trades Certification Division for a list of study materials for your trade. Try to visit the college library, public library, and the Internet. Additional materials may be available for purchase.

The Department of Advanced Education, Skills and Labour does not endorse or account for the validity of these resources. They have been provided merely as additional resources. The following links will direct you to a variety of sites and resources that could be beneficial. Please note, however, that sample exam questions may or may not be applicable to Newfoundland and Labrador or Red Seal.

Feedback Form

Please answer the following:

(1) This Study Strategies and Exam Preparation Guide helped me understand study strategies.
   □ strongly agree □ agree □ disagree □ strongly disagree

(2) The topics contained in the guide are arranged in a logical order.
   □ strongly agree □ agree □ disagree □ strongly disagree

(3) The design and format of the guide caught my attention.
   □ strongly agree □ agree □ disagree □ strongly disagree

(4) The instructions throughout the guide are clear and to the point.
   □ strongly agree □ agree □ disagree □ strongly disagree

(5) The resources listed in “Appendix A” are suitable and valuable.
   □ strongly agree □ agree □ disagree □ strongly disagree

(6) The graphics, hints and tips were clear.
   □ strongly agree □ agree □ disagree □ strongly disagree

(7) The guide should contain more information.
   □ strongly agree □ agree □ disagree □ strongly disagree

Suggested information to include:

(8) The Study Strategies and Exam Preparation Guide was helpful.
   □ strongly agree □ agree □ disagree □ strongly disagree
